## Abbreviations of ranking indicators used in the report

<b>ACC</b>	- Academic-Corporate Collaboration
<b>ACCR</b>	- Accreditations
<b>CHE</b>	- Chemical Engineering
<b>CIT</b>	- Citations
<b>CIV</b>	- Civil Engineering
<b>EEl</b>	- Electrical, Electronic, Information Engineering
<b>ENV</b>	- Environmental Engineering
<b>EUNI</b>	- European university
<b>FUND</b>	- Research and Innovation Funding
<b>FWCI-C</b>	- Change of Impact
<b>IC</b>	- International Collaboration
<b>MAT</b>	- Materials Engineering
<b>MEC</b>	- Mechanical Engineering
<b>MED</b>	- Medical Engineering
<b>PAT</b>	- Patents
<b>PCIT</b>	- Patent-Citation Count per Scholarly Output
<b>PUB</b>	- Publications
<b>SDG 3</b>	- Good health and well-being
<b>SDG 6</b>	- Clean water and sanitation
<b>SDG 9</b>	- Innovation and infrastructure
<b>SDG 11</b>	- Sustainable cities and communities
<b>SMI</b>	- Inbound student mobility
<b>SMO</b>	- Outbound student mobility
<b>SIN</b>	- Student internships
<b>TOP-10</b>	- Publications in Top 10% Journals

## Why EngiRank?

**Waldemar Siwinski**  
Founder,  
Perspektywy Education Foundation  
  
President,  
IREG Observatory  
on Academic Ranking  
and Excellence

We are proud to present the first edition of the **European Ranking of Engineering Programs EngiRank**, to its name we added the phrase **NEXT GENERATION**. Each of these words is important and requires further explanation. Why is a new Ranking needed? Why is it European? Why does it apply to Engineering Studies? And why did we feel it was appropriate to use the words **NEXT GENERATION**?

According to the analysis by IREG Observatory on Academic Ranking and Excellence, at least 100 solid university rankings are published every year; these are - international, regional, national, disciplinary (by subject), impact rankings, business school rankings and others. At the same time, we observe a growing number of opinions critical of rankings, especially the global rankings of the Big-4 group (THE, QS, USNews, ARWU). Why then, are we proposing a new ranking?

The answer is, in short: because it is needed. Students of technical faculties need it when planning to study or go for an internship abroad, European companies need it as well as the international academy. EngiRank is a voice in the discourse on the future of European industry and, indirectly, of international rankings. We are convinced that their future belongs to regional rankings "by subject".

Just a few years ago, it seemed that globalization, including scientific cooperation and academic exchange, would have no borders. The volcanic eruption in Iceland, ongoing global climate changes, then the pandemic and the war in Ukraine painfully showed us that something had come to an end when it comes to an optimistic approach to the future... The argument that global rankings will help someone choose studies in any country in the world loses its appeal. To think a high school graduate from Azerbaijan will consider studying in Argentina - it's absurd. We have learned the hard way what long "supply chains" can mean, and why it is important to ensure that in critical situations these chains are as short as possible and as European as possible.

Our ranking is European, it covers 27 European Union member states (therefore it does not include Great Britain, Switzerland, and Norway). Therefore, it was possible to construct a ranking relying on indicators unique for the EU countries, based, among others, on university's participation in the Erasmus+ and Horizon programs. Evaluating universities in countries with similar legal systems, similar cultural origins, universities that take part in joint research programs (European Research Council) and academic cooperation initiatives (consortiums of European universities) guarantees a much better presentation of their strengths and weaknesses than while relying on such defective indicator as student-to-faculty ratio.

All European countries need top-class engineers, this is a need of utmost urgency! Only in the IT area in Europe there is a shortage of almost 2 million engineers... Globalization has indeed taken a turn for the worse, but global technological competition has not slowed down, in this field those count who run faster. Engineering education plays a key role in ensuring the sustainable development of Europe, it is essential in creating innovative technologies and educating creative engineers who can use science to solve problems, but who also are aware of the social consequences of their actions. To meet these challenges in the era of internationalization of industry and labor market, best practices in engineering education need to be identified and promoted. This is what EngiRank is for. Its publication has been preceded by several years of consultations and seminars with representatives of the European industry.

“The future  
of international  
rankings belongs  
to regional rankings  
"by subject"”

### And finally, why NEXT GENERATION, or what is innovative about EngiRank?

**First.** The combination of the regional ranking with the "by subject" ranking is innovative. There already are some regional rankings – but they are to more than "extracts" from the overall THE or QS rankings – there are also global rankings in disciplines, in the case of QS and THE they rely again on a limited set of data collected for the main rankings. To use data in individual disciplines on a regional basis, and in relation to universities operating in a specific region, has not yet been done! EngiRank inaugurates this new, forward-looking approach.

**Second.** For the first time, we are publishing a ranking with emphasis on "by subject". We are publishing seven of them, all related to the "Engineering & Technology". The quality of these "by subjects" rankings constitute the "interdisciplinarity" criterion, which is included in the institutional university ranking with a high weight of 21 percent. A university to be included in the institutional EngiRank, it had to appear in at least three "by subject" rankings.

**Third.** EngiRank is a PRO BONO ranking, it has not been made to make money but with public benefit in mind. Critics of global rankings focus on allegations that universities are "forced" to scrupulously collect data, data that ranking organizations then "privatize", and include in packages sold to universities. EngiRank, however, uses only external data (exogenous) and does not offer any related database services. We are principled in this matter, in line with the mission of the Perspektywy Education Foundation, which is a not-for-profit organization, with a 25 years' tradition.

**Four.** Due to the goals of EngiRank and its strictly defined area of education and research, the ranking focuses on criteria and indicators related to relations between academia and industry. Five indicators try to capture and highlight universities that not only conduct research but are able to do it in cooperation with the industry, and to effectively implement the results in Hi Tech companies. This approach has never been seen in the rankings before!

**Five.** Into the ranking we introduced a dynamic citation impact change index (FWCI), a novelty in academic rankings. Instead of considering only the static state of citations in the four-year period immediately preceding the publication of the ranking, we refer to the result in the preceding four-year period, which gives an opportunity to distinguish universities that have made the greatest progress in research.

**Six.** A pioneering in the world of rankings is the inclusion in the "by subject" rankings, with a significant weight of 10 percent, accreditations of engineering programs by the ENAEE (European Network for Accreditation of Engineering Education). This clearly demonstrates the advantages of a regional approach to rankings!

**Seven.** EngiRank is published in absolute transparency, in the best possible form. Each ranking user has access to all indicators and can independently check the correctness of calculations. There also is a procedure for quick fixing errors should such be reported after the ranking publication.

All ranking results, including options for convenient sorting by universities, countries, disciplines, criteria and indicators will be available on the EngiRank website [www.engirank.eu](http://www.engirank.eu)

Comments and suggestions regarding EngiRank 2023 will be used when preparing the next edition of the ranking next year.

**Waldemar Siwiński**

## Ranking of the Next Generation

**University and field of study rankings are a permanent element of the education market verification mechanism and a valuable source of information for stakeholders: students, researchers, entrepreneurs, and industry interested in business- education cooperation. They also serve as a reference for higher education authorities.**

**Paweł Poszytek**  
Director General,  
Foundation for the  
Development of the  
Education System

Director,  
National Agency of the  
Erasmus+ Programme  
and the European  
Solidarity Corps

The prime purpose of the **EngiRank - European Ranking of Engineering Programs 2023** is to help prospective students and students with the choice of a field of study and institution in Europe which will give the best chances of finding a satisfactory job after graduation. It will also be helpful during study abroad and in finding an internship under the Erasmus+ Program.

To meet this objective, in the EngiRank ranking, there are as many as four indicators that refer directly to the Erasmus+ Program, i.e. two indicators concerning student mobility, one indicator concerning student internships, or participation in academic cooperation initiatives, in this case in the European University Alliances.

In addition to the indicators such as the number of publications or citations, the ranking assesses the university's innovativeness and cooperation with enterprises, measured, among others, by the extent of research funding obtained from external sources, the number of patents, and the number of scientific publications prepared with authors from outside the university.

Cooperation between universities and business plays a particularly important role in the case of technical universities. It is the driving force behind a good modern economy based on knowledge transfer, innovative education system, interdisciplinary scientific research, publication potential and investment in young researchers.

The importance of this cooperation is reflected in the European Commission's report **The state of university-business cooperation**\*). The report points to the need for cooperation between authorities, universities, and the business environment to create strategies and mechanisms to support cooperation, as well as to create an organizational culture in which it could develop in a sustainable manner.

Engineering education plays a key role in ensuring the sustainable development of Europe, making the continent greener, more digital, more resilient to future crisis, but also more aware of the social consequences of the actions taken.

Engineers are vital for the future of Europe, they are needed to keep Europe's industry globally competitive. The ranking will help industry find best engineering graduates, it will help students make educational choices for best university or best program to study or do research.

**Engineering  
education plays  
a key role  
in ensuring the  
sustainable  
development  
of Europe**

The significance and legitimacy of the new generation rankings, such as EngiRank, cannot be overestimated, as it is modelled on the objective metric data and the Multi-Attribute Value Theory. According to this theory, it is possible to estimate the value, or the aggregated score, of each higher education institution (as well as of the relevant disciplines) considering the impacts of individual criteria as measured by corresponding indicators, and thus free from subjective assessments or opinions.

EngiRank has been created not to make money, but **pro bono** with the public benefit in mind, and in accordance with the missions of the **Perspektywy Education Foundation** and the **Foundation for the Development of the Education System**. EngiRank has been published in the best possible form of transparency. Users of the ranking have an open access to all indicators and can independently check the correctness of the calculations. There is also a procedure for quick error corrections should there be any reported after the ranking is published.

**Paweł Poszytek, PhD, DSc**

# 1.

## Assumptions and Methodology

## Assumptions

Engineering education plays a key role in securing sustainable development of Europe, it is vital in creating innovative technologies and educating creative engineers capable of using science to solve problems but also aware of the social consequences of their actions. To meet these challenges in the age of growing development of the industry, labor market and education, we need a tool to compare the quality of engineering and technology programs offered by the European universities. Rankings of universities and programs have become accepted form of comparing and assessment understood by a broad range of stakeholders.

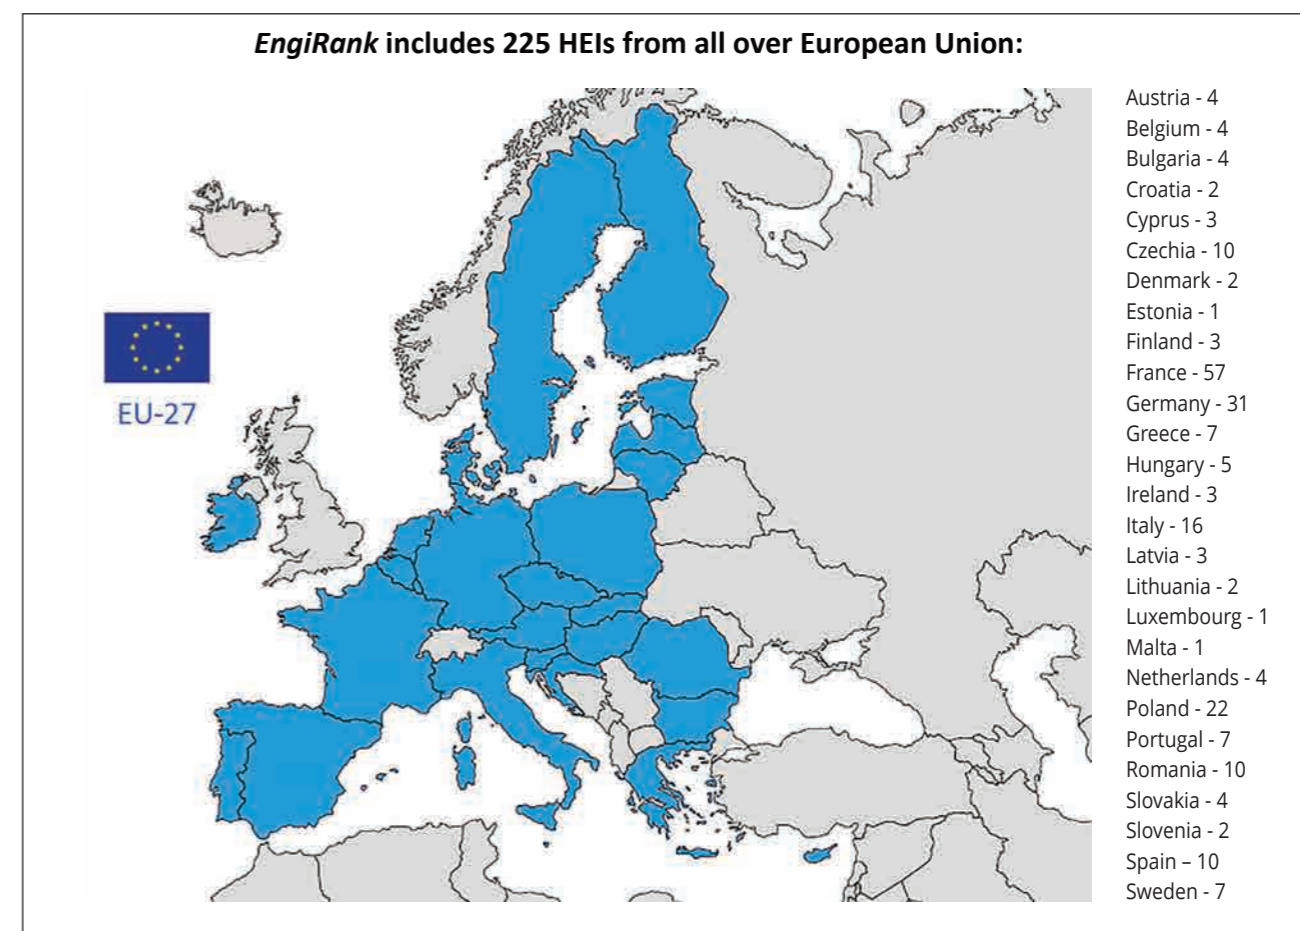

The European Rankings of Engineering Programmes *EngiRank* fills a gap regarding current and trustworthy information on engineering education, as well as research and innovation, in European universities and other higher education institutions (HEIs) with strong technical profile.

Our primary concern in designing *EngiRank* was the highest reliability of the rankings. The geographical scope of *EngiRank* covers all 27 member countries of the European Union. One of the reasons for this coverage of the rankings is related to the right of EU citizens to study in other member states under the same conditions as nationals; the exercise of this right is additionally supported by the Erasmus+ mobility programmes. Intensified student mobility brings about demands for information on the quality of European HEIs. Furthermore, consortia of institutions from various member states can apply for research and innovation funding to the Horizon Europe programmes and the recently launched European Universities initiative develops long-term cooperation between the European HEIs. These actions level the playing field for HEIs within the European Union and make comparing those institutions more meaningful.

Another factor considered essential for the *EngiRank* credibility is the quality and reliability of data. The rankings are based only on trustworthy external databases containing information on European HEIs that is collected in a unified way, such as the bibliometric database Scopus, EPO Worldwide Patent Statistical Database (PATSTAT), information on participations in the European Commission's initiatives (Community Research and Development Information Service – CORDIS, information on mobilities within Erasmus+ programmes, participation in the European universities alliances), databases of programmes accredited by quality assurance agencies. No information necessary to compile the rankings were obtained directly from HEIs.

The *EngiRank* has been initiated and prepared by the Warsaw based Perspektyw Education Foundation. The main partner of the project is the Foundation for the Development of the Education System – FRSE (Poland's national agency for the Erasmus + Program and the European Solidarity Corps). Its supporting partner is Elsevier. The *EngiRank* is primarily addressed to the following groups:

- **Prospective students and their parents** – it will help in choosing a field of study and institution in Europe that, after graduation, will give best chances of finding a satisfactory job. It will also be helpful in study abroad and finding internship under the Erasmus + program,
- **Employers, including European Hi Tech industry** – will help in looking for talented graduates of technology institutions,
- **University management** – ranking will help monitor reforms and improve the quality of teaching.

## Methodology

*EngiRank* Board decided to reduce diversification of HEIs included in the rankings in order to avoid comparing unmatchable institutions and increase relevance of the rankings.

### Entry requirements

**The ENTRY CRITERIA for institutional ranking include a qualitative condition:**

- The institutions considered to be classified in the *EngiRank* had been checked against the European Engineering Education Database (EEED) run by ENGINEERS EUROPE, a federation of professional engineering associations from European Higher Education Area (EHEA) countries;

**and quantitative conditions:**

- The HEIs with a significant share of research output in engineering and technology – at least 30% of publications from last 5 years (2018-2022) that are indexed in the Scopus database – were examined. However, the institutions with majority of publications in medical and health sciences or in social sciences between 2018 and 2022 were not considered as HEIs with strong technical profile and they are not listed in *EngiRank*;

The **subject ranking** satisfying the qualitative condition and both quantitative conditions: share of publications in engineering and technology not less than 30% and a number of publications in a discipline not less than a threshold value.

- The threshold numbers of publications in main engineering disciplines from the last 5 full years that are indexed in the Scopus database are as follows:
  - chemical engineering – 200
  - civil engineering – 100
  - electrical engineering, electronic engineering, information engineering – 200
  - environmental engineering – 100
  - materials engineering – 250
  - mechanical engineering – 200
  - medical engineering – 100.

The classification of disciplines adopted in *EngiRank* corresponds to the OECD Fields of Research and Development (FORD), both on the level of 1-digit major fields (i.e. 2. Engineering and technology, 3. Medical and health sciences, 5. Social sciences) and on the level of 2-digit categories (2.1 Civil engineering; 2.2 Electrical engineering, electronic engineering, information engineering etc.).

The **institutional ranking** within *EngiRank* includes HEIs which are classified in at least three subject rankings.

Only in exceptional cases, in order to include leading engineering-profile HEIs from all EU27 countries in the *EngiRank* institutional ranking, the threshold of E&T publications share was lowered (and if outcomes of two leading institutions were very close, we decided to include both of them in the rankings). That applies to Ireland, Croatia, Malta and Flanders.

## Innovative approach

Our particular concern in designing *EngiRank* was the degree of the institutions' commitment to their economic and social missions. To reflect transfer and application of academic knowledge by HEIs we included the indicators measuring collaboration between academia and industry researchers, use of research output in successful patent applications, as well the very patent activity of HEIs, students internships and contribution to sustainable development goals – where appropriate – into the rankings.

*EngiRank* is a composition of different categories of indicators. We believe that the scale of institution's activities matters: research and innovation exhibits increasing returns to scale, and the larger the magnitude of HEI's operations, the more opportunities for students and academic staff. Thus indicators of size, measuring volume of research output, amount of research and innovation funding, number of patents or number of publications assigned to the selected sustainable development goals, play an important role in the rankings.

Inclusion of the subject rankings scores into the institutional ranking reflects returns to scope and benefits of interdisciplinarity.

Then we have the conventional efficiency indicators expressed in relative terms, such as citations per publication, share of publication in the top 10% journals, number of patent citations received on average by a publication, percentage of publications that are co-authored by industry researchers or foreign researchers.

Introducing a dynamic indicator, change in citation impact, is a kind of novelty in the universe of HEIs' rankings.

Last, we included qualitative indicators representing engineering degree programmes accreditations and membership in a European university alliance. These indicators are closely related to the European Higher Education Area (EHEA) and clearly illustrate the advantages of a regional approach to academic rankings.

# EngiRank INSTITUTIONAL

The institutional ranking encompasses five criteria composed of 20 indicators. The most important criteria, according to their weights, are **Research** (28%) and **Innovation** (27%) – together they constitute 55% of the ranking. The third criterion, **Contribution to SDG 9**, recognizes institution's effort to make headway toward the sustainable development goal 9 - the weight of this single indicator criterion is 5%. The next criterion is **Internationalization**, with the weight equal to 19%, and the last one is **Interdisciplinarity** (weight of 21%), that links the institutional ranking with the subject rankings.

## RESEARCH (28%)

The criterion composed of four indicators originating from the Scopus bibliometric database. **Publications** is the indicator representing the institution's research output in absolute terms. Then **Citations** and **Publications in Top 10% Journals** are indicators expressed in relative terms. The last one, **Change of Impact**, is a dynamic indicator that reflects a change in the citation impact. More detailed information on each indicator is given below.

- **Publications (PUB):** number of publications from the years 2018-2022 in the field *Engineering and technology* (FORD classification) in the Scopus database which are affiliated with the institution. Source: *Scopus/SciVal* (10%)
- **Publications in Top 10% Journals (TOP-10):** percentage of the institution's publications published in the top 10% journals by CiteScore in the field *Engineering and technology* in the years 2018-2022. Source: *Scopus/SciVal* (6%)
- **Citations (CIT):** ratio of the number of citations received by the institution's publications from the years 2018-2022 in the field *Engineering and technology* indexed in the Scopus database to the number of these publications. Source: *Scopus/SciVal* (6%)
- **Change of Impact (FWCI-C):** dynamic indicator calculated as the ratio of field-weighted citation impact (FWCI) for the institution's publications from the years 2018-2022 to FWCI for the publications from the years 2013-2017 in the field *Engineering and technology*. Source: *Scopus/SciVal* (6%)

## INNOVATION (27%)

The criterion composed of four indicators. First, **Research and Innovation Funding** and **Patents** are expressed in absolute terms and refer to the European frameworks of research and innovation funding and patent granting, respectively. The Scopus bibliographic database was the source for calculating the remaining two indicators: **Patent-Citation Count per Scholarly Output** and **Academic-Corporate Collaboration**. Both are expressed in relative terms. More detailed information on the indicators is given below.

- **Research and Innovation Funding (FUND):** value of grants awarded to the institution within the EU framework programmes funding research and innovation between 2018 and 2022. Source: *CORDIS* (10%)
- **Patents (PAT):** number of patents granted to the institution by the European Patent Office in 2018-2022. Source: *EPO-PATSTAT* (6%)
- **Patent-Citation Count per Scholarly Output (PCIT):** average number of patent citations received per scholarly outputs published by the institution in the field *Engineering and technology* in 2018-2022. Source: *Scopus/SciVal* (6%)
- **Academic-Corporate Collaboration (ACC):** percentage of publications the field *Engineering and technology* published between 2018 and 2022 that are co-authored by researchers affiliated to an institution outside academia. Source: *Scopus/SciVal* (5%)

### PATSTAT

The **European Patent Office's Worldwide Patent Statistical Database – PATSTAT** is the most prominent patent database that has become a standard in the field of patent intelligence and statistics. The PATSTAT product line consists of two individual databases:

- **PATSTAT Global**, containing bibliographical data relating to more than 100 million patent documents from leading industrialised and developing countries,
- **PATSTAT EP Register**, containing bibliographic and legal event data on published European and Euro-PCT patent applications.

The databases are available as a bulk data set or via PATSTAT Online, which is a web-based interface. PATSTAT Online allows to run queries in the databases, conduct statistical analyses, visualise the data and download it for offline use.

## CONTRIBUTION TO SDG (5%)

The single indicator criterion. The indicator measures institution's contribution to sustainable development goal 9 with the number of publications assigned to SDG 9 and to the field *Engineering and technology*.

- **SDG-9:** number of publications from 2018-2022 assigned simultaneously to the United Nations *Sustainable Development Goal 9: Industry, innovation and infrastructure* and to the field *Engineering and technology* (FORD classification). *Source: Scopus/SciVal (5%)*

## INTERNATIONALIZATION (19%)

The criterion composed of five indicators. The **International Collaboration** indicator is derived from the Scopus bibliographic database. The remaining indicators refer to the scale of students' mobility within the Erasmus+ programme and to the institution's participation in a European university alliance. More detailed information on each indicator is given below.

- **International Collaboration (IC):** percentage of the institution's publications in the field *Engineering and technology* in the years 2018-2022 that have co-authors from multiple countries. *Source: Scopus/SciVal (10%)*
- **Outbound student mobility (SMO):** number of institution's students undertaking studies abroad within the Erasmus+ programme in 2018-2020. *Source: Erasmus+ (2%)*
- **Inbound student mobility (SMI):** number of foreign students undertaking studies in the institution within the Erasmus+ programme in 2018-2020. *Source: Erasmus+ (2%)*
- **Student internships (SIN):** number of institution's students undertaking internships abroad within the Erasmus+ programme in 2018-2020. *Source: Erasmus+ (1%)*
- **Partnership in a European university alliance (EUNI):** binary indicator showing whether the university is a full member of any European university alliance as of 3.07.2023. *Source: Erasmus+ (4%)*

### EUROPEAN UNIVERSITIES

The **European Universities alliances** are a flagship initiative of the European strategy for universities. European Universities develop and implement an integrated long-term joint strategy for education with, where possible, links to research and innovation, for the benefit of their students, staff and society. Beyond cooperation between higher education institutions, European Universities alliances foster collaboration with other partners, including civil society, and local and regional authorities with the aim to bring education and innovation closer together through joint activities. Currently, there are 50 European Universities alliances, involving more than 430 higher education institutions.

## INTERDISCIPLINARITY (21%)

This criterion identifies universities conducting high-level research in many fields of engineering and technology, which makes it easier for them to create future-oriented, interdisciplinary programs for the High-Tech industry. The criterion combines institutional rankings with subject rankings and rewards institutions classified in a larger number of disciplines and obtaining higher scores in these rankings. Seven "by subject" rankings are taken into account.

- **Chemical Engineering (CHE):** scores received in CHE subject ranking. *Source: EngiRank by subject (3%)*
- **Civil Engineering (CIV):** scores received in CIV subject ranking. *Source: EngiRank by subject (3%)*
- **Electrical Engineering, Electronic Engineering, Information Engineering (EEI):** scores received in EEI subject ranking. *Source: EngiRank by subject (3%)*
- **Environmental Engineering (ENV):** scores received in ENV subject ranking. *Source: EngiRank by subject (3%)*
- **Materials Engineering (MAT):** scores received in MAT subject ranking. *Source: EngiRank by subject (3%)*
- **Mechanical Engineering (MEC):** scores received in MEC subject ranking. *Source: EngiRank by subject (3%)*
- **Medical Engineering (MED):** scores received in MED subject ranking. *Source: EngiRank by subject (3%)*

## EngiRank BY SUBJECT

The *EngiRank 2023* rankings in the following disciplines:

- **Chemical Engineering**
- **Electrical Engineering, Electronic Engineering, Information Engineering**
- **Materials Engineering**
- **Mechanical Engineering**

are based on three criteria: **Research** (64%), **Innovation** (26%) and **Teaching Quality** (10%).

Then we addressed the potential and expected contribution of HEIs' activities in the remaining disciplines to the particular sustainable development goals (SDGs):

- **Civil Engineering** – SDG 11: Sustainable cities and communities
- **Environmental Engineering** – SDG 6: Clean water and sanitation
- **Medical Engineering** – SDG 3: Good health and well-being.

Thus the additional criterion, **Contribution to SDGs** (5%), was added for each of the above disciplines, and simultaneously the weights of other criteria were cut: **Research** - to 60%, and **Innovation** - to 25%.

Every indicator in the subject rankings refers strictly to a given discipline. Some indicators in the institutional ranking and in the rankings by subject are based on the same metrics, differing only in the scope of publications or grants considered. Although such indicators from the rankings by subject are indirectly included in the institutional ranking (via the *Interdisciplinarity* criterion) that shouldn't be considered a duplication of the indicators. Note that some HEIs are not classified in all the subject rankings in particular, approximately only half of HEIs listed in the institutional ranking are classified in the medical engineering ranking).

Besides, even in case of HEIs classified in all the rankings by subject there are publications and grants not covered by the subject rankings indicators, like the ones in general engineering; nuclear energy and engineering; control and systems engineering; safety, risk, reliability and quality; media technology; bioengineering; other miscellaneous engineering. They are counted in the institutional ranking only.

## RESEARCH (60%/64%)

The criterion composed of four indicators originating from the Scopus bibliographic database. Publications is the indicator representing the institution's research output in absolute terms. Then Citations and Publications in Top 10% Journals are indicators expressed in relative terms. The last one, Change of Impact, is a dynamic indicator that reflects a change in the citation impact. More detailed information on each indicator is given below.

- **Publications (PUB):** number of publications from the years 2018-2022 in the relevant discipline in the Scopus database which are affiliated with the institution. *Source: Scopus/SciVal (15%/16%)*
- **Publications in Top 10% Journals (TOP-10):** percentage of the institution's publications published in the top 10% journals by CiteScore in the relevant discipline in the years 2018-2022. *Source: Scopus/SciVal (15%/16%)*
- **Citations (CIT):** ratio of the number of citations received by the institution's publications from the years 2018-2022 in the relevant discipline indexed in the Scopus database to the number of these publications. *Source: Scopus/SciVal (15%/16%)*
- **Change of Impact (FWCI-C):** dynamic indicator calculated as the ratio of field-weighted citation impact (FWCI) for the institution's publications from the years 2018-2022 to FWCI for the publications from the years 2013-2017 in the relevant discipline. *Source: Scopus/SciVal (15%/16%)*

## CONTRIBUTION TO SDGs (0%/5%)

The single indicator criterion. The indicator measures institution's contribution to selected SDGs in defined disciplines by the number of publications.

- **SDG-3: Good health and well-being** (*medical engineering only*): number of publications from 2018-2022 assigned simultaneously to the United Nations Sustainable Development Goal 3: Good health and well-being and to medical engineering (FORD category 2.6). *Source: Scopus/Scival (5%)*
- **SDG-6: Clean water and sanitation** (*environmental engineering only*): number of publications from 2018-2022 assigned simultaneously to the United Nations Sustainable Development Goal 6: Clean water and sanitation and to environmental engineering (FORD category 2.7). *Source: Scopus/Scival (5%)*
- **SDG-11: Sustainable cities and communities** (*civil engineering only*): number of publications from 2018-2022 assigned simultaneously to the United Nations Sustainable Development Goal 11: Sustainable cities and communities and to civil engineering (FORD category 2.1). *Source: Scopus/Scival (5%)*

### SDGs

The **Sustainable Development Goals (SDGs)** are a collection of seventeen interlinked objectives adopted in 2015 by the 193 countries of the United Nations General Assembly (UNGA) as a part of the 2030 Development Agenda titled "Transforming our world: the 2030 Agenda for Sustainable Development." The SDGs emphasize the interconnected environmental, social and economic aspects of sustainable development by putting sustainability at their center and serve as a "shared blueprint for peace and prosperity for people and the planet, now and into the future." The UNGA resolution of 6 July 2017 identified 8-12 specific targets for each goal and provided between one and four indicators used to measure progress toward reaching each target.

The *EngiRank* recognises the potential and expected contribution of HEIs with strong technical profile to achieving SDG 9: Industry, innovation and infrastructure. Similarly, activities of HEIs in certain engineering and technology disciplines can support implementation of particular SDGs:

- Civil Engineering – SDG 11: Sustainable cities and communities,
- Environmental Engineering – SDG 6: Clean water and sanitation,
- Medical Engineering – SDG 3: Good health and well-being.

The indicators' weights in particular subject rankings are summarised in the table below.

EngiRank BY SUBJECTS	RESEARCH				INNOVATION		TEACH	SDG		
	Publications	Publications in Top 10% Journals	Citations	Change of Impact	Academic-Corporate Collaboration	Research and Innovation Funding	Accreditations	SDG 3: Good health and well-being	SDG 6: Clean water and sanitation	SDG 11: Sustainable cities and communities
Chemical Engineering	16%	16%	16%	16%	16%	10%	10%	-	-	-
Civil Engineering	15%	15%	15%	15%	15%	10%	10%	-	-	5%

Medical Engineering	15%	15%	15%	15%	15%	10%	10%	5%	-	-

## TEACHING QUALITY (10%)

The single indicator criterion. The indicator is measured by the number of the degree programmes accredited by ENAEE authorised agencies or by ABET (more information on ENAEE and ABET in the box below).

- **Accreditations (ACCR)**: number of engineering degree programmes related to the relevant discipline accredited by the agency authorized by the European Network for Accreditation of Engineering Education (ENAEE) or by the Accreditation Board for Engineering and Technology (ABET) as of 30.06.2023. *Source: databases of EUR-ACE labelled programmes (ENAEE authorised) and of ABET accredited programmes (10%)*

### ACCREDITATIONS

The **European Network for Accreditation of Engineering Education (ENAEE)** is a non-profit organization that gathers accreditation and quality assurance agencies from various countries (mostly EU) and builds a pan-European framework for the accreditation of engineering education programmes. ENAEE has established the EUR-ACE (European Accredited Engineer) label, although it does not accredit directly engineering degree programmes itself. After positive evaluation of policies and procedures followed by member accreditation and quality assurance agencies, ENAEE authorizes them to award the EUR-ACE label to the engineering degree programmes accredited by these agencies. Currently, 15 agencies are authorized by ENAEE; they signed a Mutual Recognition Agreement, known as the EUR-ACE Accord.

The **Accreditation Board for Engineering and Technology (ABET)** is a non-governmental organization established in 1932 in the United States (originally as the Engineers' Council for Professional Development). Currently, there are 4564 post-secondary education programmes in applied and natural sciences, computing, engineering and engineering technology accredited by ABET, that are distributed over 895 institutions in 40 countries.

## INNOVATION (25%/26%)

The criterion composed of two indicators. The Scopus bibliometric database was the source for calculating the **Academic-Corporate Collaboration** indicator. The values for the **Research and Innovation Funding** are based on information from the CORDIS database.

- **Academic-Corporate Collaboration (ACC)**: percentage of publications in the relevant discipline published between 2018 and 2022 that are co-authored by researchers affiliated to an institution outside academia. *Source: Scopus/SciVal (15%/16%)*
- **Research and Innovation Funding (FUND)**: value of grants awarded to the university within the EU framework programmes funding research and innovation between 2018 and 2022 to finance research projects in the relevant discipline. *Source: CORDIS database (10%)*

### CORDIS

**Community Research and Development Information Service (CORDIS)** is the European Commission's principal and official service for delivering information on projects funded by the European Union's framework programmes for research and innovation, from the First Framework Programme (1984-1987, budget €3.8bn) to Horizon Europe (2021-2027, budget €95.5bn). CORDIS has a single search service that allows to perform simple searches (by term), combine them with filters that apply to selected content collections as well as edit queries to use advanced search syntax (with Boolean operators). The heart of the CORDIS repository is the public information on the projects that is derived from the grant agreements once they have been signed and includes i.a. the project's objectives, topics, dates, funding amounts and participants. Total number of projects in the repository is 125.962 and their cost exceeds €350bn.

The subject rankings list the following number of HEIs: • Chemical Engineering – 167 • Civil Engineering – 145 • Electrical, Electronic and Information Engineering – 177 • Environmental Engineering – 178 • Materials Engineering – 191 • Mechanical Engineering – 169 • Medical Engineering – 91.

## Method of calculation

The *EngiRank* rankings are modelled on the basis on the *Multi-Attribute Value Theory*. According to the theory, it was assumed - firstly - that it is possible to estimate the value, or the aggregate score, of each HEI (as well as the disciplines under consideration) taking into account impacts of the individual criteria as measured by corresponding indicators. Secondly, it was assumed that if the criteria are not equally important, then bringing them to comparability is possible by weighting the corresponding indicators with appropriate coefficients. Thirdly, the additivity of weighted criteria was assumed meaning that the final score is the linear combination of partial scores. Moreover, the indicators with an asymmetric distribution are generally subject to the transformation (square root or cube root) to reduce skewness of the distribution.

The partial scores for every indicator are calculated with reference to the leading institution. The score of 100 is assigned to the HEI with the highest indicator value and for the other institutions a proportional distance to the leader is calculated. The partnership in a European university alliance is a specific binary indicator corresponding - each of 92 universities listed in the institutional ranking that is a member of any European university alliance is assigned a score of 100.

Partial scores for all the indicators obtained by the HEI – both in the subject rankings and in the institutional ranking – are added using appropriate weights. Then the HEIs are ranked according to the weighted sum of scores in the descending order. The leading institution is assigned the final score of 100, and the subsequent institutions receive scores that are equal to the ratio of their weighted sum of partial scores to the one for the leader (in percentage terms). Position of HEIs in a ranking is determined using a discrimination threshold of 1% pt. of the final score. It means that institutions with final scores differing by less than 1% pt. occupy the same *ex aequo* position in the ranking.

Position of HEIs is determined by threshold of 1% pt. Institutions with final score differing by less than 1% pt. occupy ex aequo the same position.

## Abbreviations of ranking indicators used in the report

<b>ACC</b>	- Academic-Corporate Collaboration
<b>ACCR</b>	- Accreditations
<b>CHE</b>	- Chemical Engineering
<b>CIT</b>	- Citations
<b>CIV</b>	- Civil Engineering
<b>EEl</b>	- Electrical, Electronic, Information Engineering
<b>ENV</b>	- Environmental Engineering
<b>EUNI</b>	- European university
<b>FUND</b>	- Research and Innovation Funding
<b>FWCI-C</b>	- Change of Impact
<b>IC</b>	- International Collaboration
<b>MAT</b>	- Materials Engineering
<b>MEC</b>	- Mechanical Engineering
<b>MED</b>	- Medical Engineering
<b>PAT</b>	- Patents
<b>PCIT</b>	- Patent-Citation Count per Scholarly Output
<b>PUB</b>	- Publications
<b>SDG 3</b>	- Good health and well-being
<b>SDG 6</b>	- Clean water and sanitation
<b>SDG 9</b>	- Innovation and infrastructure
<b>SDG 11</b>	- Sustainable cities and communities
<b>SMI</b>	- Inbound student mobility
<b>SMO</b>	- Outbound student mobility
<b>SIN</b>	- Student internships
<b>TOP-10</b>	- Publications in Top 10% Journals

# 3.

## EngiRank 2023 by Subject

Chemical Engineering .....	30
Civil Engineering.....	34
Electrical, Electronic & Information Engineering .....	38
Environmental Engineering .....	42
Materials Engineering .....	46
Mechanical Engineering .....	50
Medical Engineering .....	54

The methodology of the European Ranking of Engineering Programs  
"EngiRank 2023 by Subject" can be found on page 15.

## Engineer – proud creator

**The meaning of engineering.** There are various ways to define the profession of engineering. I would like to refer here to the 1828 definition from England describing engineering as an art in steering the forces of nature for the benefit of a human. In other words, an engineer is someone who designs something with the idea that what he designed and implemented works and even brings benefit.

The word “engineer” comes from the Latin *ingeniatu*s. It describes a person who can invent something, is smart and has an open mind. Once, people who were responsible for construction of war machines and fortifications were called engineers. It was a military engineering. With the time engineering skills had been used for other than military purposes like construction of dams, roads and bridges, it became known as civil engineering. At first the job of engineers had been limited to transforming of what was on and in the earth: roads, forts, mines. With the emergence of the industrial revolution and steam engines mechanical and electrical engineers appeared. The number of engineering specialties has since greatly increased.

Engineering, in our contemporary meaning, emerged when the geometry and math replaced intuition in the process of designing. Mathematics forms the base of both science and engineering. Scientists, researchers use it to generalize their findings while engineer use mathematics to rationalize the designing process.

**The task of an engineer differs from the task of a researcher.** A researcher has to operate within strict laws of science, an engineer aware of the limitations defined by science but using his intelligence, imagination and experience has to predict what cannot be fully calculated or counted. Because not everything can be counted, therefore we speak of the “art of engineering” which is something different from the scientific knowledge. A scientist describes what already exists, while an engineer creates something that does not yet exists.

The Industrial Revolution had not been the work of scientists but the work of artisans and engineers, the result not of their knowledge but intuition. First, the steam engine had been built and only after that the principles of thermodynamics that stood behind were understood. Even today it often happens that the achievements of technology precede scientific theories explaining them.

The important aspect of being an engineer is the ability to predict social consequences of his activity. Also important, both in science and engineering, is the ethical aspect. The significant difference here is that while a scientist who

comes up with a wrong theory may be criticized or ridiculed, an engineer who builds a faulty bridge that can collapse, brings about a disaster that may kill people.

Engineers also think a different way; more than others, they pay attention not just to the very idea of the proposed solution but to its practical side and effectiveness. The way an engineer thinks is to design something, to build it and then test if it works. Inventing something abstract, that does not bring about some benefit is contrary to the art of engineering.

**Engineering education.** The characteristics of the engineering profession, briefly outlined above, cause the teaching in the universities of technology to differ in many aspects from the teaching done in many other disciplines. Like in the case of the medical studies, a strongly profiled group of candidates choose studies in technology.

A good engineering education pays attention to the development of student’s personality. It creates a person who will understand the consequences of the actions he is taking, will be aware that he acts within a social framework, and understands that there is neither technology for the sake of technology nor production for the sake of production. Let us bear in mind that the great engineers, the founders of modern technology were also humanists who understood the consequences of their activity. They were able to link pragmatism with imagination and phantasy. After all, in order to create, one must first imagine. Creation is not a heartless process that can be performed by computers. It that was so, we would long be eliminated!

The contemporary engineering studies evaluate fast in the direction of broad specialization, following general understanding that a young person must be prepared to change profession several times in his or hers life span.

The aim of studies in engineering is not solely the transfer of knowledge in certain subjects, mostly sciences, but also (or equally) to provide students with the feeling and understanding of what constitutes the “raison d’être” of their professional group. The society expects **engineers to be able to provide safe functioning of the technological infrastructure essential for life and growth.**

The key word describing engineer’s role is “responsibility”; responsibility understood as an ability to predict the effects of actions taken and to prevent the possible negative consequences. For that, in spite of similarities, there are important differences between education in science and engineering.

Waldemar Siwinski

Position of HEIs is determined by threshold of 1% pt. Institutions with final score differing by less than 1% pt. occupy ex aequo position.

## Abbreviations of ranking indicators used in the report

<b>ACC</b>	- Academic-Corporate Collaboration
<b>ACCR</b>	- Accreditations
<b>CHE</b>	- Chemical Engineering
<b>CIT</b>	- Citations
<b>CIV</b>	- Civil Engineering
<b>EEl</b>	- Electrical, Electronic, Information Engineering
<b>ENV</b>	- Environmental Engineering
<b>EUNI</b>	- European university
<b>FUND</b>	- Research and Innovation Funding
<b>FWCI-C</b>	- Change of Impact
<b>IC</b>	- International Collaboration
<b>MAT</b>	- Materials Engineering
<b>MEC</b>	- Mechanical Engineering
<b>MED</b>	- Medical Engineering
<b>PAT</b>	- Patents
<b>PCIT</b>	- Patent-Citation Count per Scholarly Output
<b>PUB</b>	- Publications
<b>SDG 3</b>	- Good health and well-being
<b>SDG 6</b>	- Clean water and sanitation
<b>SDG 9</b>	- Innovation and infrastructure
<b>SDG 11</b>	- Sustainable cities and communities
<b>SMI</b>	- Inbound student mobility
<b>SMO</b>	- Outbound student mobility
<b>SIN</b>	- Student internships
<b>TOP-10</b>	- Publications in Top 10% Journals

# 4.

## EngiRank by Criteria subrankings

Research.....	58
Innovation .....	58
Contribution to SDG .....	59
Internationalization .....	59
Interdisciplinarity .....	60

EngiRank by Criteria subrankings refer to EngiRank Institutional 2023.  
For a description of the indicators, see "Methodology" on page 13.

## Technical University of Denmark – DTU (Denmark)

# Innovation Ecosystem

Existing for almost 200 years, the Technical University of Denmark presents itself as a university where people think, talk and work together on solutions to create a sustainable world of the future.

DTU is a modern university, oriented towards the future and change, and proudly refers to its roots. The founder of the university was the father of electromagnetism, **Hans Christian Ørsted**. His goal was to create a university that would serve society by finding solutions to existing problems and responding to challenges. The path to this goal led through technical and natural sciences.

Today, DTU prides itself on being a research-based, business-oriented university of technology and on international, multidisciplinary cooperation implemented at the intersection of university, social policy and industry. How does it look in practice?

### The basis of university work: innovative research

DTU's research work is focused primarily on innovation - and innovation is in its DNA. However, this is not looking for solutions for the sake of research satisfaction alone; the goal of all activities undertaken at DTU by scientists, doctoral students and students is **the social utility of the research projects**. Hence the synergy of academic and applied research declared by DTU. The university emphasizes: *We help students and employees translate inventions and discoveries into enterprising businesses, and we engage in innovative collaborations with society as a whole.*

DTU's modus operandi is based on multi-level cooperation between the university and business. For this, commercialization agreements are concluded with companies – based on these agreements, entrepreneurs can draw on the results of research conducted at the

university, as well as use inventions registered by DTU. A special unit (**DTU's tech transfer**) has a full database of technologies, patents, and inventions from the DTU portfolio. Another form of cooperation with business is strategic cooperation and "ordered" research at DTU aimed at developing new technologies that can be used commercially. **The DTU Skylab** unit was established to help companies develop their business.

Commercialization of DTU research has resulted in the university involvement in **over 1,200 commercialization projects**. They are implemented both for startups and corporations with an established market position.

Scientific and didactic work is supported by DTU's specialized infrastructure, which includes: highly advanced technologies and equipment (e.g. NMR spectroscopy and state-of-the-art measurement equipment at **The DTU NMR Center**), research facilities (e.g. **Dana IV** research vessel, versatile and multi-purpose), competence centers (e.g. **The 3D Imaging Center, 3DIM**, i.e. a competence center in the field of X-ray and neutron imaging) and laboratories (e.g. Industrial dosimetry services, **The High Dose Reference Laboratory**); experimental halls (e.g. **PowerLabDK**, i.e. an experimental electric power platform) or rich databases (e.g. **Computerome**, one of the largest HPC clusters in Scandinavia dealing with research in the field of natural sciences; Computerome has 20 PB of memory, over 31,000 cores and a library containing over 3,000 different applications).

### Student: an important element of the ecosystem

Education at DTU is based not only on lectures, but also on exercises and project work by students. Students are a part of an innovative community, and their research should have a chance of commercialization. That's why DTU has the **Center for Entrepreneurship in Technology**, which develops practice-oriented DTU study programs and courses in entrepreneurship. These programs and courses are conducted in close cooperation with the business sector.

One of the courses offered to second-cycle students at DTU is the Innovation in Engineering training.

#### DTU in numbers

- 10 410 FTE students (source: THE)
- 1351 staff (source: THE)
- 3 Nobel Prize winners
- 5 campuses
- 17 doctoral schools

**Engineering programs must prioritize sustainability**

*We are delighted to be named Europe's best university in the new EngiRank of the engineering programs in Europe. The position reflects our strategic focus on offering top-quality engineering education, delivering excellent research and being the business community's preferred partner. EngiRank provides some interesting new perspectives on the European higher engineering education landscape. Because it focuses on the EU countries and thus can rely on EU data sources such as CORDIS and Erasmus+, the ranking provides new insights into research and innovation funding as well as student mobility.*

*At DTU, we emphasize that the engineering programs must prioritize sustainability. This is a mandatory part of the education in all DTU's fields of study - regardless of whether you want to be an environmental engineer, a wind turbine engineer or an IT engineer. The students must consider sustainability in all tasks and products they work with during their studies at DTU. They will also be impressed upon that technology and natural science must be connected with a broader understanding of societal conditions, equality and ethics.*

*Engineers have an important role to play in the green transition by creating solution to mitigate the climate crisis - the most severe threat to our planet. Engineers have a unique ability to develop and implement innovative technologies, so it is not enough to have a single mandatory sustainability course - it must permeate all corners of our educations.*

*But it is also crucial that business is involved. The technical universities' green focus would not have much effect if it was not also in demand in the business world. And it does.*

*I hear from Danish companies that it is extremely important that engineers have a deep understanding of sustainability, because virtually all industries are working these years to ensure that their production and solutions wear out less on our planet. It is therefore imperative for future engineers that they can think in terms of sustainable solutions. The practical experience combined with the green way of thinking also means that our engineers are sought after and get to work quickly.*

**Prof. Rasmus Larsen**  
Provost, DTU Executive Vice President

## Innovation Ecosystem

› Students implement this module work for one semester in multidisciplinary teams, learn in practice, what the process of innovative solutions looks like.

### The six principles that students master in this process are:

- Be iterative • Be creative
- Be relevant • Be at ease
- Be inclusive • Be inquisitive

DTU has one of the most developed innovation and entrepreneurship ecosystems among technical universities in Europe. New ideas and inventions are taken outside classrooms and research laboratories into the real world, where, new jobs are created, problems are solved in response to challenges in society.

### Internationalization

Presence in university networks, including alliances of European Universities (EuroTech Universities, EuroTeQ Engineering University, Nordic Five Tech), alliances established as part of bilateral cooperation with the best universities in the world (including Nanyang Technological University, Singapore; Cornell University, USA), joint

implementation of projects in teams of scientists, PhD students and students, joint study programs, joint postdoctoral programs, joint research initiatives, etc. – is how DTU pursues one of its main goals, which is to use complementary competences in the area of education, innovation and research. Strategic international alliances support DTU's mission of being useful to Danish society, and fit into the university's ambitions to maintain a high position and recognition and constantly stimulate DTU's development.

\*\*\*

The latest folder presenting facts and figures about DTU opens with a quote from the university's president, **prof. Anders O. Bjarklev**: *During times of stormy weather technology continues to give us hope.* This allusion to the times of crisis we are witnessing today rightly draws attention to technical universities. An approach based on the belief that technological progress will be wisely used, based on values such as those raised, among others, at DTU: social utility, respect for multiculturalism and interdisciplinary cooperation can bring truly good changes in the world. ■

### Trivia

DTU was founded on the model of the French university École Polytechnique and the first seat of the Danish university was located on the estate of its founding father, Hans Christian Ørsted, in the heart of Copenhagen. Ørsted's goal was to educate young men at DTU to work in industry, but this became possible only in the 1870s (earlier education was theoretical in nature), and only at the turn of the 19th and 20th centuries did the university reach an international level of excellence until finally, in the first decades of the 20th century, engineers from DTU gained international recognition in the fields of structural engineering, shipbuilding and electrical engineering

### DTU News

One of the activities supporting students' innovation in the field of climate-related challenges is the Green Challenge conference at DTU, held at DTU Skylab, accompanied by a competition for student projects relating directly to the UN Sustainable Development Goals. The jury in the competition consists not only of DTU employees, but also representatives of the world of business and politics. This year's competition was won by Victor Ryle Tamstorf, a second-cycle student of Design and Innovation at DTU - his project related to Goal No. 6 (ensuring the availability and sustainable management of water and sanitation for all). Victor received 30,000 Danish crowns for his idea.

Victor's project is a small disinfection unit (using the electrochlorination method, so the device requires salt, chlorine and electricity to operate) used to purify rainwater.

For Viktor Ryle Tamstorf, the project primarily aims to change the situation of people who do not have access to clean drinking water. The project is aimed at people who would otherwise have to drink contaminated water. However, this solution can also be used in EU countries where there is very little groundwater - says Victor.

## Delft University of Technology – TU Delft (Netherlands)

### Engineering leaders change the future

**Delft University of Technology is the oldest and largest Dutch public technical university, established in 1842 by King William II. Impact for a better society is the motto of the university.**

Delft University of Technology contributes to solution of global challenges by educating new generations of socially responsible engineers and expanding the frontiers of the engineering sciences. **Its mission is to perform world-class research by combining science, engineering and design in a socially responsible manner;** develop and enhance the expertise of tomorrow's engineering leaders and educate professional, high-level and responsible engineers throughout their careers. The university helps to develop and deliver technology-driven, innovative solutions to societal problems through collaborations with leading national and international partners.

The university's primary tasks – academic research and teaching, and knowledge transfer are carried out by eight faculties at TU Delft: Architecture and Environment; Civil

Engineering and Geosciences; Electrical Engineering; Mathematics and Computer Science; Industrial Design Engineering; Aerospace Engineering; Technology Policy and Management; Applied Sciences; Mechanical, Maritime and Material Engineering.

Delft University of Technology has always been an entrepreneurial university. Over the last 180 years, many inventions and ground-breaking research found its way from the laboratory to society. Delft University of Technology stimulates entrepreneurship in a number of ways: by investing in start-ups, by offering education programs focused on entrepreneurship and by coaching starting companies, among others with the incubator **YES!Delft**.

### Important scientific contribution

TU Delft researchers developed many new technologies used today, including **Glare**, a **Fibre Metal Laminate** used in Airbus A380 skin and Vision in Product Design design method. **Cees Dekker's lab** at TU Delft demonstrated in 1998 the first transistor made out of

## Engineering leaders change the future

single nanotube molecule. TU Delft was a precursor of **Open design concept**.

In architecture, TU Delft is famous for **Traditionalist School in Dutch architecture**. TU Delft was a home to many prominent microbiologists including **Martinus Beijerinck**, who in 1898 discovered viruses while working at TU Delft, and **Albert Kluyver**, father of comparative microbiology, which resulted in the creation of so-called **Delft School of Microbiology**.

TU Delft is in the process of raising its international profile in several areas, some of them relatively new. This is to be achieved by clustering research capacity – either physically or virtually – in a number of university-wide institutes: **TU Delft Institutes**.

**TU Delft AgTech Institute** promotes research and innovation in AgriFood technology. The virtual **TU Delft Bioengineering Institute** strengthens the campus-wide collaboration of scientists working in, with or for biology. **Climate Institute** takes actions to limit climate change. **TU Delft Institute for Computational Science and Engineering** is rapidly developing field that brings together applied mathematics, engineering and (social) science. **DelftRail Institute** is initiated to ensure a sustainable, robust and future proof railway system. **Design for Values Institute** is a design approach aimed at integrating values in all stages of the

### TU Delft News

Researchers at Delft University of Technology, led by assistant professor Richard Norte, have unveiled a remarkable new material with potential to impact the world of material science: amorphous silicon carbide (a-SiC).

Beyond its exceptional strength, this material demonstrates mechanical properties crucial for vibration isolation on a microchip. Amorphous silicon carbide is therefore particularly suitable for making ultra-sensitive microchip sensors.

The range of potential applications is vast. From ultra-sensitive microchip sensors and advanced solar cells, to pioneering space exploration and DNA sequencing technologies. The advantages of this material's strength combined with its scalability make it exceptionally promising.

### TU Delft in numbers

**21 262** FTE students (source: THE)

**1337** staff (source: THE)

**3** Nobel Prize winners associated with TU Delft: Jacobus van 't Hoff – chemistry; Simon van der Meer – physics; Heike Kamerlingh Onnes - physics

### Trivia

On its campus, TU Delft has a wide range of research facilities. These facilities are unique in the Netherlands and are used to conduct research for business and industry. They range from wind tunnels, a chip facility, high-voltage laboratory and nuclear reactor to serious gaming and product evaluation. Some of facilities are: **Reactor Institute Delft, Holland Proton Therapy Centre, QuTech research center for Quantum Computing and Quantum Internet, Laboratory Aircraft Citation II (PH-LAB)**.

design process. **Dutch Optics Centre** aims at boosting the optics industry by increasing utilisation of science through joint R&D. **e-Refinery** develops electrochemical conversion technology for the sustainable production of chemicals and fuels. These are examples of just a few of the many TU Delft Institutes.

Research works are also led at **QuTech** which is a mission-driven research institute of Delft University of Technology (TU Delft) and the Netherlands Organisation for Applied Scientific Research (TNO). Here researchers work on a new technology with world-changing potential. Its goal is to develop scalable prototypes of a quantum computer and an inherently safe quantum

internet, based on the fundamental laws of quantum mechanics: *We believe that quantum technology can be a game changer in many social and economic sectors, including health, agriculture, climate and safety.*

### Initiatives solving society issues

**Delft Research Initiatives** aim to make an important scientific contribution to solving issues facing society that relate to four themes - **Delft Energy Initiative, Delft Global Initiative, Delft Health Initiative and Delft Deltas, Infrastructures & Mobility Initiative**.

The Delft Energy Initiative DEI is TU Delft's scientific community on sustainable, affordable, reliable, and inclusive energy. 1000 researchers, supported by an even larger army of PhD and other students work on technology, methods, principles, insight, and solutions for the energy system of the future. The DEI serves as a catalyst between research, society, industry, and businesses in order to accelerate the energy transition. DEI consists of 4 main cross-faculty energy institutes: **Wind Energy, Urban Energy, PowerWeb and e-Refinery**.

Global Initiative's research focuses on pressing global challenges in the developing world with the aim to have impact and improve people's lives. Delft Health Initiative brings together researchers involved in health research and innovation, in order to focus TU Delft expertise and to contribute to pioneering health technologies within relevant national and international research programs.

Delft Deltas, Infrastructures & Mobility Initiative is working on integrated solutions for urgent social issues related to vital infrastructural facilities for water safety and smart mobility; issues inherent in the natural and built environment.

### Talent development

TU Delft is brimming with talent driven by a passion for technology and the ambition to make a difference in the world. Since 1925, **Delft University Fund** has supported TU Delft by contributing to research, education, talent development and entrepreneurship. With donations from alumni, students, foundations and companies, the university helps talented students and scientists to realize their ambitions and make an impact on society.

**Making the world a better place**

*Technology is very important to address major societal problems, whether it is energy transition, digitalization, sustainable medical care or climate change. These problems require engineers, scientific breakthroughs and technologies. TU Delft does this together with other universities, with social sciences and medical sciences.*

*I think that this approach, making the world a better place together, translates into our position. A ranking position should never be a goal by itself, but it is nice to see when the efforts that you put into doing a good job translate into a high position.*

*We perform world-class research by combining science, engineering and design in a socially responsible manner. To make this possible you need ambitious students, top scientists and supporters, top facilities, and top partners. That's what so nice about rankings, a high position makes finding good partners easier because they create exposure and the outside world sees that. Partners want to collaborate with us more easily or come and work for us.*

*I appreciate the EngiRank initiative to set up a European ranking for Engineering Programs. I believe that subject rankings are more relevant for our university than world university rankings as they compare universities with similar profiles and missions with each other. The focus on Europe as a geographical area might prove valuable when it opens up the opportunity to go a bit deeper than the conventional rankings.*

**Prof. Tim van der Hagen**  
President of the Board and Rector of TU Delft

Thanks to a financial contribution, ambitious students are given the opportunity to deepen their knowledge and broaden their horizons. Every year, Delft University Fund presents various awards to students and alumni, such as the **TU Delft Best Graduate Award, the Alumnus of the Year and the Professor of Excellence Award**. These awards ensure that outstanding talent receives the attention they deserve and provide an inspiration for future engineers. ■

KU LEUVEN

# KU Leuven (Belgium) Community of Minds

#3

Deriving its traditions from one of the oldest European universities (Katholieke Universiteit te Leuven, founded in 1425), today's Flemish KU Leuven boasts of being the most innovative European university (Reuters classification 2016 and 2019).

KU Leuven's innovativeness is proven by the Patents indicator in EngiRank 2023 – KU Leuven obtained the highest result in this indicator among all classified universities.

KU Leuven proudly proclaims: *Over the past five decades, KU Leuven Research & Development (LRD) has launched a myriad of innovative technologies in society and the commercial market, allowing companies to create products that improve people's lives. LRD helps researchers to best leverage the societal and economic potential of their research and has developed a solid tradition of creating*

*spin-off companies, securing and licensing intellectual property, and collaborating with industry. [...] In 2022, 144 patents were*

#### DTU in numbers

- 49435 FTE students (source: THE)
- 1325 staff (source: THE)
- 270 traineeships
- 3 Award Nobel Prize winners

#### KU Leuven News

The ERC-2023 Starting Grants competition awarded funding for 400 projects, including 4 conducted by young researchers from KU Leuven. One of the awarded projects is X-PECT conducted by Prof. Elke Debroye from the Faculty of Chemistry at KU Leuven. The researcher's goal is to design materials that will enable the use of more sensitive X-ray detectors and thus lead to the use of lower doses of surgical radiation. Thanks to the developed solution, it will be possible to reduce the harmfulness of radiation, which is used in many imaging methods and therefore poses a health risk to diagnosed patients.

*granted and a license-income of 150 million euro was obtained by KU Leuven.*

#### Religion does not limit

Although the university has its roots in the Catholic tradition, today it presents itself as a modern university, rising above divisions. KU Leuven declares that it accepts and supports various religious and philosophical beliefs. This is proven, for example, by the existence of the KU Leuven Lifescience Network, a *network of international representatives of many religious and non-religious Lifescience groups active in and around Leuven and its university*. Activities undertaken by the KU Leuven

### Rankings are important

*We are ranked 42 in the Times Higher Education World University Rankings. We are also advancing in other rankings such as QS and Shanghai.*

*Not everyone likes me to talk about that. However, whatever your opinion, rankings are important in terms of their effects. They influence the choices of students and researchers.*

*They determine who you speak to and who speaks to you.*

Prof. Luc Sels  
Rector of KU Leuven

speech during the opening of the Academic Year 2023-2024

Lifescience Network included, for example, the creation of a multi-denominational cookbook with recipes from different cultures, monthly meditation practices conducted by representatives of various faiths, and aid actions and support for refugees from Ukraine.

#### Learning beyond borders

KU Leuven's religious openness results from deeper motives - a modern university has no chance of achieving an international position and recognition if it does not dare to make internationalization the litmus test of its capabilities. At KU Leuven, this focus on internationalization can be felt almost at every step –for example when browsing the university's website, where the vast majority of subpages contain content related to the university's internationalization: internationalization of research, education, and international academic and business cooperation.

This approach is best illustrated by the 48% of PhD degrees awarded in the academic year 2021/2022 at KU Leuven that were awarded to foreigners, brought to the university in accordance with the approach to actively recruit young research talents, offering them individualized education taking into account non-academic skills (e.g. entrepreneurship, effective communication).

The last inaugural lecture by Rector Luc Sels, titled *An international university also benefits its own region*, was devoted to internationalization and the challenges associated with it. He said among others: *Science pushes boundaries. Science also knows no boundaries. Or, more accurately, it should know no boundaries. However, it is increasingly subject to boundaries in a world of rapid geopolitical change that is also divided into haves and have-nots in terms of scientific capacity.*

#### Community of minds

The Belgian university proudly boasts of the number of 138 ERC grants received since 2007, 1st place in the Horizon Europe program and 1st place in the **Marie Curie Doctoral Networks** in Horizon Europe in 2022 (KU Leuven participates in 25 of the 149 awarded total projects – 13 coordinated!). The latest success in the field of academic cooperation is the ERC Synergy Grant for VIB-KU Leuven was awarded by the ERC in October 2023, for the considerable amount of EUR 10 million.

KU Leuven is not just a place on a map, but is a community of minds where the development of academic entrepreneurs of tomorrow is supported, should be considered a hit.

#### Trivia

In the 1960s, in the wake of the years-long conflict between the two ethno-linguistic groups forming the common Belgian state (Flemish and Walloon), e.g. dispute over the status of the Catholic University of Louvain located in the Flemish part of Brabant. Flemish students then demanded, among other things, removal of all lectures in French from the timetable. Demonstrations by professors and students took place under the slogan *Walenbuiten!* (Down with the Walloons!), and after the parliamentary elections in 1968, it was decided to resolve the dispute over the University of Louvain by establishing two sister universities: Katholieke Universiteit Leuven with Dutch as the language of instruction and the French-speaking Université Catholique de Louvain (which moved to a new location). Today, these two sister universities cooperate in the areas of education, research, and organization.

#4

**TECHNICAL UNIVERSITY OF MUNICH**  
Germany

President: **prof. Thomas F. Hofmann**  
(scientific field: Food Chemistry and Molecular Sensory Science)

The university, founded in 1868, prides itself that from the beginning of its existence it has set one goal: finding solutions to the main challenges facing society as civilization progresses.

TUM is the only German technical university that, since 2006 has continuously held the title of University of Excellence - Exzellenzuniversität (status granted by the German government as part of the Excellence Strategy).

The university focuses on innovation, it reorganizes internal structures, transforming them into more dynamic, change-oriented. TUM wants to function as a modern scientific ENTERPRISE. Hence, instead of faculties, schools were established whose activities are linked by integrative research institutes operating at the intersection of scientific disciplines.

**TUM in numbers:** 35 506 FTE students, 800 staff (source: THE); 18 Nobel Prize winners (9 in chemistry, 6 in physics, 2 in medicine and 1 in literature - Thomas Mann); 24 Leibniz Prize winners; 200 ERC grants.

**PROF. THOMAS F. HOFMANN**  
President

#5

**GHENT UNIVERSITY**  
Belgium

Rector: **prof. Rik Van de Walle**  
(scientific field: Engineering)

The university has existed since 1817 and presents itself as a pluralistic university, unrelated to any religion or ideology. Ghent University's motto: *we are a haven for bold thinkers*.

Being among the 100 best universities in the world since 2014, it was the first European university to start providing education as part of the Incheon Global Campus in South Korea at the invitation of the Korean government, i.e. an international university campus to which 10 prestigious universities from around the world were invited to educate global leaders in education, economics, industry, culture and art.

Ghent University Global Campus offers three bachelor's degree programs in life sciences: environmental technology, food technology and molecular biotechnology.

**Ghent University in numbers:** 41 487 FTE students, 1103 staff (source: THE); 2 Nobel Prize winners (1 in literature, 1 in medicine); 140 ERC projects assigned.

**PROF. RIK VAN DE WALLE**  
Rector

**POLYTECHNIC UNIVERSITY OF MILAN**  
Italy

Rector: **prof. Donatella Sciuto**  
(scientific field: Computer Architectures and Operating Systems)

The Polytechnic University of Milan is the first technical university established in Italy (in 1863, originally as a Higher Technical Institute).

The university runs the Girls@POLIMI project, which aims to support girls determined to study STEM fields. As part of the project, 25 students are awarded scholarships of EUR 8,000 per year (the scholarship can be received for up to three years) and a special mentoring and training program. Prizes are awarded to girls who decide to study the following fields: aeronautical and space engineering; automation; electrical engineering; electronics; computer engineering; mechanics; industrial production engineering. The project is financed by 12 corporations (including Hitachi Energy, Gruppo Autostrade per l'Italia, Mediobanca) as well as PUM itself and the PUM alumni association. Other gender-specific activities of PUM conducted for high school students include: TechCamp@POLIMI, Coding Girls, STEM in the City).

Another interesting PUM project is VIVIPolimi conducted on campuses in Milan. Campus spaces are being rebuilt to create relaxation, work/study and social meeting zones.

**PUM in numbers:** 38 978 FTE students, 1517 staff (source: THE); 291 traineeships; 1 Nobel Prize winner (Giulio Natta, Nobel Prize in Chemistry in 1963).

**PROF. DONATELLA SCIUTO**  
Rector

[www.polimi.it](http://www.polimi.it)

**EINDHOVEN UNIVERSITY OF TECHNOLOGY**  
Netherlands

Rector: **prof. Silvia Lenaerts** (scientific field: Chemistry)

A very young university founded in 1956, established in cooperation of local administration, industry and academia, it combines scientific curiosity with craft skills. The Eindhoven University of Technology campus is located in the center of one of the most powerful technology centers in the world: Brainport Eindhoven, hence the university's close cooperation with the advanced technology industry.

The university prides itself on educating engineers of the future. Teaching is conducted in the Challenge Based Learning system, it is based on the principle of searching for solutions to existing (and derived directly from the world of industry and social life) challenges (such as sustainable energy, cities of the future, models data to predict group behavior). Working in such a system involves actively acquiring knowledge and skills often in interdisciplinary student groups. There are units on campus such as Innovation Space (a well-equipped institution where an inspiring environment of students, trainers, mentors, startups and scientists work together on solutions to social challenges) and the Student Sport Center (open 7 days a week for students, corporate employees, lecturers).

Kornelis Antonie "Kees" Schouhamer Immink, a Dutch engineer, entrepreneur and scientist who co-invented CDs, DVDs and Blu-Ray discs, studied at TU/E.

**Eindhoven University of Technology in numbers:** 10 611 FTE students, 496 staff (source: THE); 1 Nobel Prize winner in chemistry in 1952.

**PROF. SILVIA LENAERTS**  
Rector

## KARLSRUHE INSTITUTE OF TECHNOLOGY Germany

President: **prof. Oliver Kraft**  
(scientific field: Materials Science)

The oldest German technical university (founded in 1825). Since 2019, it has been one of the 11 universities of excellence (Exzellenzuniversität) in Germany. Karlsruhe Institute of Technology won the competition thanks to the concept The Research University in the Helmholtz Association I Living the Change. The assumptions presented in the competition emphasized the strengthening of research in the full scope, from basic research to applications and the way to achieve this goal included the creation of 100 new professorial positions, intensive dialogue with society and offering credible career paths to young scientists.

The university's graduates include, among others: Józef Zawadzki, rector of the Warsaw University of Technology (1937-1939).

**Karlsruhe Institute of Technology in numbers:** 21 448 FTE students, 1046 staff (source: THE); 9 research centers; 6 Nobel Prize winners.

## KTH ROYAL INSTITUTE OF TECHNOLOGY Sweden

President: **prof. Anders Söderholm**  
(scientific field: Business Administration)

The university, founded in 1827, is today the largest technical university in Sweden. The university belongs to the network of European Universities – to the Unite! consortium. Education is provided within the schools: Architecture and the Built Environment; Electrical Engineering and Computer Science; Engineering Sciences; Engineering Sciences in Chemistry, Biotechnology and Health; Industrial Engineering and Management.

KTH is working with industry and society in the pursuit of sustainable solutions to some of humanity's greatest challenges: climate change, future energy supply, urbanization and quality of life for the rapidly-growing elderly population. KTH is addressing these with world leading, high-impact research and education in natural sciences and all branches of engineering, as well as in architecture, industrial management, urban planning, history and philosophy.

One of the university's outstanding researchers was Hannes Alfvén, winner of the Nobel Prize in Physics in 1970.

**KTH Royal Institute of Technology in numbers:** 13 269 FTE students, 835 staff (source: THE); 2 Nobel Prize winners.

## RWTH AACHEN UNIVERSITY Germany

Rector: **prof. Ulrich Rüdiger** (scientific field: Physics)

Founded in 1870. Currently the largest technical university in Germany. RWTH Aachen University belongs to the German universities of excellence (Exzellenzuniversität), and the funds obtained thanks to the program were intended, among others, for the expansion of the campus – it is to be developed in close cooperation with industry and is to constitute one of the largest research parks in Europe.

The university prides itself on creating a multinational community of knowledge – this is facilitated by both the university's location (close to the German border with Belgium and the Netherlands) and the university's close ties with the world's largest research and industrial partners. The size of research conducted at RWTH Aachen University is demonstrated by, for example, the amount of EUR 487.7 million spent on (mostly) commissioned research under external financing.

The key research areas identified by the university are: Computational Science & Engineering; Energy, Chemical & Process Engineering; Information & Communication Technology; Material Science & Engineering; Medical Science & Technology; Molecular Science & Engineering; Mobility & Transport Engineering; Production Engineering.

**RWTH Aachen University in numbers:** 34 914 FTE students, 806 staff (source: THE);

## AALTO UNIVERSITY Finland

Rector: **prof. Ilkka Niemelä** (scientific field: Computer Science)

Very young (started in 2010) university, which was created by the merger of the Helsinki School of Economics, Helsinki University of Technology and the University of Art and Design Helsinki. Aalto University was established as a priority project in the Finnish university renewal. The idea was to create a new innovative university merging science and technology, design and art, and business and economics.

Long-term purpose Aalto University is to excel and make breakthroughs in and across science, art, technology and business. Aalto University's purpose is to shape a sustainable future.

Internationalization is an integral part of all activities, services and operational policies at Aalto University. It plays a significant role in enabling the university to continue to develop towards a world-class university. In 2023, Aalto University was ranked 47th in THE internationalization criterion in THE ranking. Aalto University has professors from over 40 countries.

The university operates the Open University Aalto University, which offers individual courses (in the field of business, technology, languages and art and design) for everyone regardless of origin or age. Until June 2024, Ukrainian citizens can use the offer of the Aalto Open University for free.

**Aalto University in numbers:** 14 427 FTE students, 707 staff (source: THE).

## Perspektywy

“**Perspektywy**” Education Foundation (*Fundacja Edukacyjna „Perspektywy”* – in Polish) is an independent, non-profit organization established (1998) to promote and support education. Its Board consists of present and former rectors and outstanding public figures interested in the development of higher education in Poland and globally.

“Perspektywy” publishes annually university ranking of Polish universities [www.ranking.perspektywy.org](http://www.ranking.perspektywy.org), and ranking of the best secondary schools in the country and Ranking of MBA Programs in Poland [www.mba.pl](http://www.mba.pl). These rankings are recognized as the most popular and reliable educational rankings in Poland.

“Perspektywy” with the Conference of Rectors of Academic Schools in Poland (CRASP) runs a joint program “Study in Poland” promoting Polish universities abroad and helping universities attract international students. [www.studyinpoland.pl](http://www.studyinpoland.pl)

“Perspektywy” runs popular projects promoting participation of women in the STEM education and encouraging young women to enroll into studies in new technologies:

Perspektywy Women in Tech Summit [www.womenintechsummit.pl](http://www.womenintechsummit.pl).

IT for SHE [www.itforshe.pl](http://www.itforshe.pl)

“Perspektywy” due to its experience and competence in the area of higher education organizes prestigious international conferences and its members are invited as experts in Poland and abroad.

**THE FOUNDATION FOR THE DEVELOPMENT OF THE EDUCATION SYSTEM** is the only institution in Poland with such extensive experience in managing educational programmes, especially EU programmes. FRSE's reputation has resulted in it being entrusted with the responsibilities of the Polish National Agency for the Erasmus+ Programme and the European Solidarity Corps.

**Among the programmes and initiatives managed by the Foundation are:**

**Erasmus+ • eTwinning • Eurodesk • Europass • Eurydice • WorldSkills • EPALE**

In addition, FRSE supports cooperation with eastern countries through the Polish-Lithuanian Youth Exchange Fund and the SALTO Eastern Europe and Caucasus Resource Centre. Since 2016, it has also managed the Polish-Ukrainian Youth Exchange Council. FRSE was also the operator of the European Economic Area (EEA) Scholarship and Training Fund.

- Until 2016, FRSE acted as the Contact Point for the SCIEX Scholarship Fund in Poland.
- From 2014 to 2023, FRSE implemented the Operational Programme Knowledge Education Development, which is the successor to the Operational Programme Human Capital.
- In 2018, FRSE became the National Agency of the European Solidarity Corps, a programme dedicated to volunteering, and the operator of the EEA-funded Education programme.
- The Foundation for the Development of the Education System has been nominated by the Ministry of National Education to be the coordinating institution for Poland's preparation for the EuroSkills and WorldSkills competitions. With its acceptance into the WorldSkills community in October 2018, just after a promising start at the 2018 European competition, FRSE began organising qualifiers for the next editions.

### EuroSkills Gdansk 2023

The Foundation for the Development of the Education System was the organiser of the 8th edition of EuroSkills – the European Championships for Young Professionals, which took place in Gdansk between 5-9 September 2023, for the first time in Poland. This largest professional skills competition on the Old Continent brought together:

- **576** qualified young professionals under the age of 25
- **572** experts
- representatives from **32** countries
- the Polish national team won **13** medals.

A total of 335 medals were handed out in **43** skills during the competition, and **88** business partners joined in organising the event. The Polish team won:

- 3 gold medals
- 1 silver medal
- 3 bronze medals
- 6 Medallions for Excellence.

The EuroSkills Gańsk 2023 competition was the largest international event in which the Foundation for the Development of the Education System was honoured to participate.

### European Universities

The European Universities Initiative, implemented under the Erasmus+ programme, is a revolutionary project that aims to modernise European higher education. Key tenets of the initiative are the potential to increase the competitiveness of European universities, improve the quality of education, promote student and faculty mobility, support innovation and research, and strengthen social and cultural cohesion.

European Universities are an important step towards a more competitive and united European higher education system. They are an innovative response to the challenges of the 21st century and an excellent example of international cooperation. Behind this initiative is the idea of creating a long-term strategy in the field of education in which students, doctoral students and professors can use the resources of participating universities, allowing them to choose where and what they study through a flexible curriculum.

**The project can be implemented under one of two 'pathways':**

**Track 1:** Deepening existing transnational cooperation (continuation of cooperation within existing alliances and the possibility of expanding them to new actors).

**Track 2:** New transnational cooperation (creation of new alliances).

To participate in the European Universities project, an application is required to the EACEA via the Funding & Tenders Opportunities portal. The Foundation for the Development of the Education System organises Conferences of European Universities. Its purpose is to exchange experience, undertake joint initiatives leading to the development of long-term, structural, sustainable and systemic cooperation in education, research and innovation across Europe. Another activity is the organisation of a competition to award the most committed Polish universities working in international university partnerships.

## FRSE Publishing

The Foundation for the Development of the Education System also has its own publishing house, which publishes more than 30 titles a year. In addition, it issues guides, reports, monographs and examples of good practice – all titles are free to download at [czytelnia.frse.org.pl](http://czytelnia.frse.org.pl)

It is possible to subscribe to the Publisher's publications and to send free materials to schools, universities or NGOs interested in our offer. In addition, the Publishing House can help organise an educational conference, training course or workshop and supports such initiatives with publications from its reading room.

## InnHUB Innovation Centres

Erasmus+ InnHUBs are cross-sectoral innovation hubs whose main aim is to promote European education programmes and bring Erasmus+ offers closer together with universities, local authorities, vocational training centres, schools and businesses. Currently, Erasmus+ InnHUB innovation centers are operating in cities such as Kraków, Katowice, Poznań, Gdańsk, Wrocław, Opole and Łódź.

In addition, the InnHUB centres support Action 2 of the Erasmus+ programme, which raises awareness about cooperation opportunities for organisations and institutions such as schools, universities or NGOs and businesses.

The activities of InnHUB establishments are not only limited to content-related support – they are also involved in educational events and, with their activity, increase the level of innovation of projects implemented under the Erasmus+ programme.
